PROFESSIONAL SUMMARY

Computer Engineering graduate (Ege University) with experience in full-stack, mobile (iOS and Android) and DevOps engineering in banking and energy technology. Builds secure and scalable microservices with Java, Python and Spring Boot, owns bank-wide authentication flows at Yapı Kredi Teknoloji, and works with Docker, Kubernetes and CI/CD pipelines in cross-functional Scrum teams.

WORK EXPERIENCE

Software Engineer, Yapı Kredi Teknoloji | August 2025 – Current

- Developing and maintaining full-stack enterprise applications using Java, PHP, PL/SQL and Python on the back-end, with a strong focus on performance, security, and scalability. Actively involved in the migration of monolithic systems to microservice-based architectures, designing RESTful services and contributing to system architecture decisions.
- Building and enhancing mobile applications for iOS (Swift) and Android (Kotlin) platforms, focusing on usability and secure data handling. Collaborating with cross-functional teams to deliver reliable banking solutions while following clean code principles and best practices.
- Managing the bank-wide authentication systems, owning end-to-end login flows across web and mobile channels. Actively monitoring production systems using Grafana, Prometheus, and Kibana, analyzing logs and metrics to improve stability and security.
- As a Scrum Master working closely with teams using Atlassian tools (Jira, Confluence) to track incidents, document processes, and ensure smooth delivery of authentication features.

DevOps Engineer, Yapı Kredi Teknoloji | February 2025 – August 2025

- Contributed to the development and maintenance of internal developer tools using Spring Boot, Go, React, and PHP.
- Assisted the team in optimizing CI/CD pipelines utilizing Docker, Helm, Kustomize, SonarQube, and Fortify.
- Managed cloud-native applications with Kubernetes (AKS, OpenShift), ArgoCD and Cloud Foundry, enhancing scalability and reliability.

Software Engineer, Powea Sustainable Energy Solution | March 2023 – September 2024

- Designed scalable backend microservices (Python/Java) to securely integrate Reinforcement Learning models for dynamic-pricing charge schedules, which contributed to a 40% reduction in operational costs.
- Architected a Smart Charging mobile application for iOS (Swift) and Android (Kotlin), integrating an EV station locator and real-time route optimization.
- Implemented automated CI/CD pipelines utilizing Docker to streamline the train-test-deploy lifecycles for MLFlow and core backend services.

Software Engineer Intern, Securify Identity | June 2024 – September 2024

- Gained hands-on experience in microservices architecture by assisting in the development and containerization of internal tools using Docker.
- Participated in the deployment of internal services on Azure cloud infrastructure while learning production-level best practices.

Software Developer, Pointy Nine Agency | December 2023 – April 2024

- Worked closely with senior engineers to understand production microservices and help resolve bugs using clean code principles.
- Gained hands-on exposure to building and containerizing internal tooling using C#, TypeScript, React.js, Next.js, and MySQL.

PROJECTS

Trendyol BaaS (Banking-as-a-Service) Integration | May 2026 – October 2026

- Played a pivotal role as a core developer in building the secure login and transaction verification backend for the Trendyol BaaS partnership, implementing robust microservices (Java Spring Boot) and integrating advanced security measures like SEAL V3 and device registration.
- Engineered the mobile SDK integrations for both iOS (Swift) and Android (Kotlin) platforms alongside the team, ensuring seamless user authentication and secure transaction signing within the partner ecosystem.

Yapı Kredi Kripto Inter-App Routing & SSO System | April 2026 – May 2026

- Developed a seamless bidirectional inter-app routing architecture and Single Sign-On (SSO) login flow between the Yapı Kredi Kripto application and the main banking app.
- Engineered the full-stack integration by designing secure backend services for token validation using custom DTOs, alongside handling dynamic consent flows and deep-link processing across mobile clients. Utilized Swift for iOS, Kotlin for Android, and backend architectures to manage secure state transfer and application lifecycles.

VOLUNTEER EXPERIENCE

Artificial Intelligence Student Club, Autonomous Car Team | January 2024 – April 2024

- Actively contributed to the development of the Autonomous Car Project, specializing in image processing tasks. Utilized MATLAB and Python for tasks such as object detection, lane tracking and image recognition. Leveraged technologies and libraries like OpenCV, TensorFlow and NumPy to design and implement robust computer vision algorithms. Collaborated closely with a multidisciplinary team to integrate image processing components into the autonomous vehicle system, enhancing its decision-making capabilities.

Google Developer Student Clubs, Social Media Designer | February 2022 – September 2022

- As the social media designer, took part in creating a dynamic learning environment for students who are into technology and software. Organized classes and seminars about Google Tech from the social media side. Used Adobe Photoshop, Illustrator and Canva for social media posts.

AIESEC in Izmir, Sales Floor Team Member | November 2021 – March 2022

- Developed the Product Knowledge, Communication Skills, Customer Engagement, Sales Techniques, Team Collaboration, Adaptability and Goal Achievement skills by working on the sales floor team AIESEC which is a global youth-led organization focused on providing leadership development and cross-cultural exchange opportunities.

EDUCATION

B.S. in Computer Engineering, Ege University | Izmir, Turkey | June 2025

CERTIFICATIONS

- Microservices Foundations Professional Certificate – Kong | May 2026
- Microsoft Azure Essentials Professional Certificate – Microsoft | April 2026
- AWS Certified Cloud Practitioner (CLF-C02) Cert Prep – LinkedIn | March 2026
- Microsoft Security Essentials Professional Certificate – Microsoft | March 2026
- Microservices: Design Patterns – LinkedIn | February 2026
